ST

Dear Joao,

You might be aware of the H2020 ERIGrid project (www.erigrd.eu) – a H2020 Research Infrastructure (RI) project supported by the EERA Joint Programme for Smart Grids (<http://www.eera-set.eu/eera-joint-programmes-jps/smart-grids/>). ERIGrid deals with the validation of power systems/smart grid configurations which is an emerging topic nowadays.

One of the main activities of ERIGrid is the provision of power system/smart grid labs to external users for free in the so-called Transnational Access (TA). Details about the TA are available at <https://erigrd.eu/transnational-access/>. According to the H2020 RI TA rules we are offering every 6 month in the project a call for user projects (overall about 9 calls are planned during the project execution). External users need to write a short proposal (about 5-10 pages long) about their plans how to use one of the provided labs of the ERIGrid partners. Such proposals need to be evaluated by a so-called User Selection Panel (USP).

Currently we are setting-up the USP with project members and external persons (a request by the European Commission - EC). We are kindly inviting you to become a member of the ERIGrid USP. Your task would be to review about 1-3 proposals (not more; depending on the amount of submissions and topic of the proposed user projects) per call (calls are closing every 6 month). We will try to keep your effort as low as possible.

Pls. let us know if you are able to become a member of the USP. If you need more information about ERIGrid as well as the TA don't hesitate to get in contact with me.

Many thanks in advance for your feedback and comments.

PS: You are also kindly invited to apply for ERIGrid user projects!

Best Regards
Thomas
Coordinator ERIGrid
